

Plascon Products for Machine construction and Plant engineering applications

LOAD & WORK PIECE CARRIER

- Load carriers made from UHMW-PE ensure safe and above all protective transport of goods in the logistics sector.

- Certificated plastics guarantee non-arcing work for electrical component industry

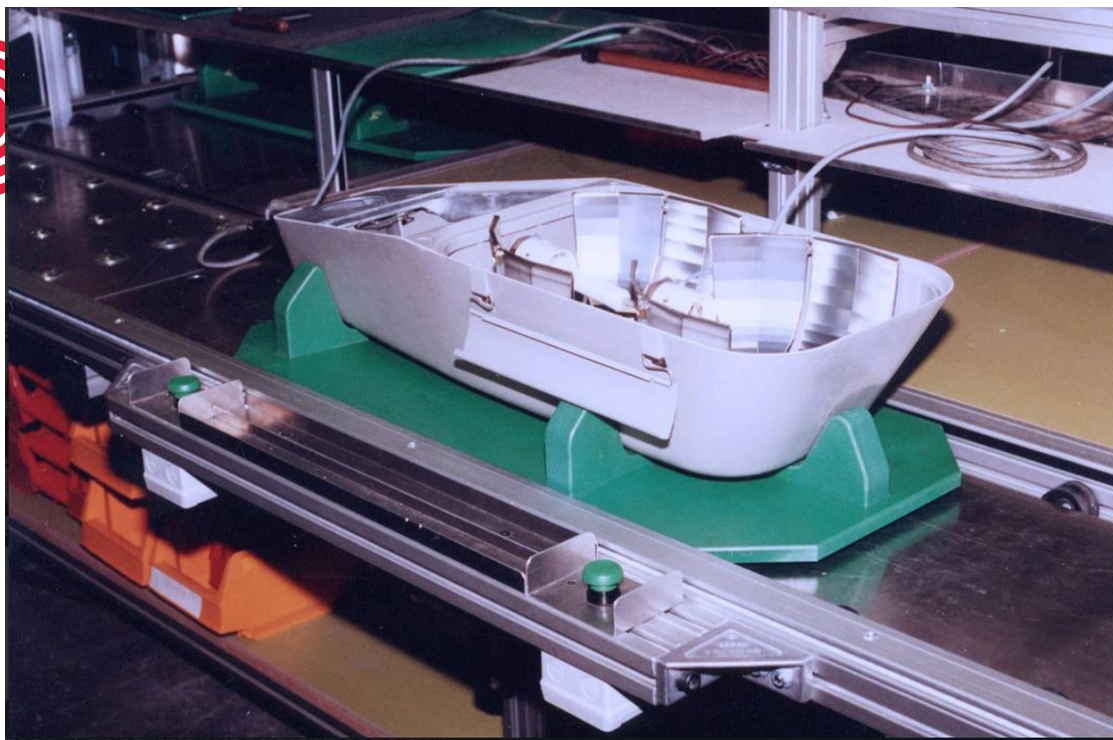

High-quality sliding partners are required when highly sensitive components need to be transported. Antistatic and electrically conductive properties allow work to be carried out in demanding environments without the risk of sparks being created. Antistatic and electrically conductive properties allow work to be carried out in demanding environments without the risk of sparks being created.

ADVANTAGES

High-quality plastics for the gentle transport of highly sensitive components
Spark-free work thanks to antistatic and electrically conductive properties

PRODUCTS FOR THIS APPLICATION

- Plascon-P FG green
- Plascon-V-Fg Black
- Plascon-V-Fg Black AS (antistatic for Electrical/Non arcing application)

Green colored Machined pellet/Fixture/Jig/Conveyor pellet
used to hold street light housing while on assembly line

Work piece being
assembled

Other supports
on pellet to hold
the component

Plywood support

Plascon conveyor
fixture

CNC machined Conveyor plate to hold the assembled component on conveyor

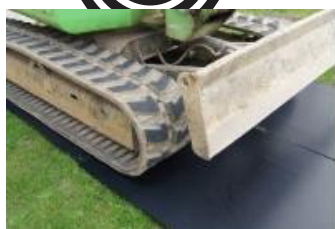

Environmentally-friendly Recycled soil protection & support technology

Stable PE Recycled sheets guarantee a safe underground. Our environmentally-friendly floor-protection and support slabs deliver the safety needed in a wide variety of applications. Safe foundations must be ensured when cranes and other construction-site vehicles are used. Our materials are the perfect solution for such applications.

BENEFITS

- Protection of surfaces
- Low wear
- High resistance to harsh weather (rains, hot and cold sub zero weather)
- Excellent energy absorption
- Unbreakable

Suitable recommendation for this application
Polyrib-C black (multicolored chip black Recycled sheets)

Recessed sheets for better
handling

Solutions for Mechanical and Plant engineering

We offer tailor-made solutions made of different plastics like UHMWPE, PE 500, HDPE, PP, Cast Nylon, POM Polyacetal (Delrin), ABS and Teflon, for a whole range of industries, each one produced according to your individual needs and application. With the help of various available materials, a distinctive manufacturing expertise and a wide range of machinery, we manufacture finished parts for various industries.

Mechanical and Plant engineering

For mechanical engineering, we manufacture in particular finished parts that have low abrasion and can be used in highly corrosive media. Mostly Plascon-V, PlasconV-005 are used. For higher mechanical strength Kaylon and Paketal are generally used. For low wear applications Plascon-C Regenerated quality can be used.

Components for Machine Building Industry

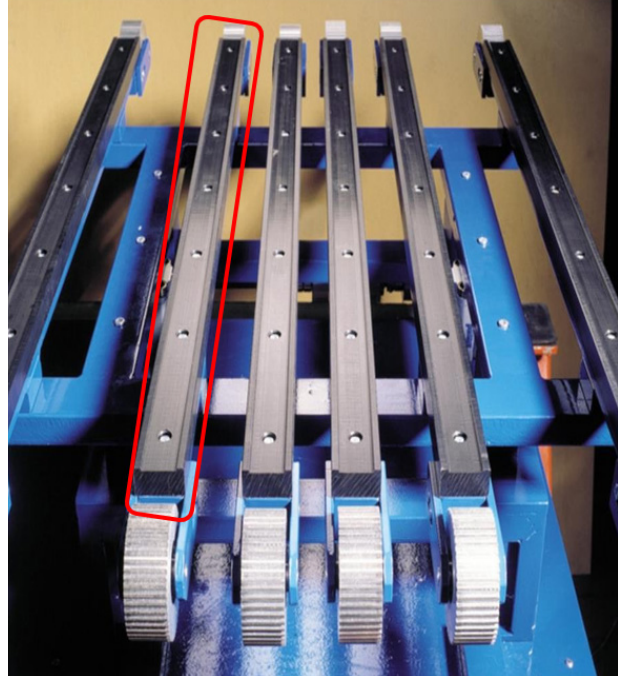

Modern plastics are increasingly replacing significantly more expensive metals in engineering. Many components can be manufactured from Plascon, UHMW to experience less wear. The material's advantages are especially notable in the transport mechanism sector due to the high level of wear and abrasion resistance and low coefficients of sliding friction.

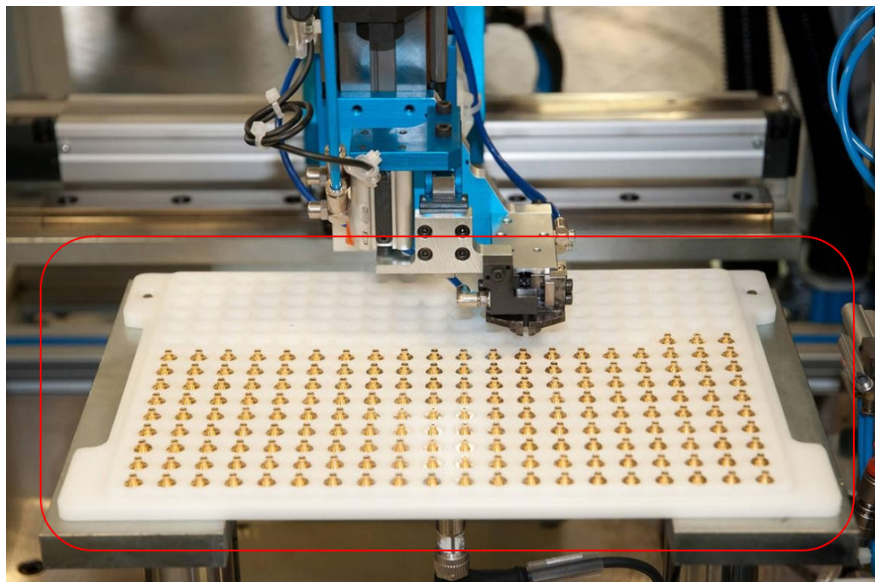

Plascon Products for General engineering and plant

Green color Wear Strips on the Top of Hoppers to prevent the wear of

Black guides and Sprockets for small conveyors

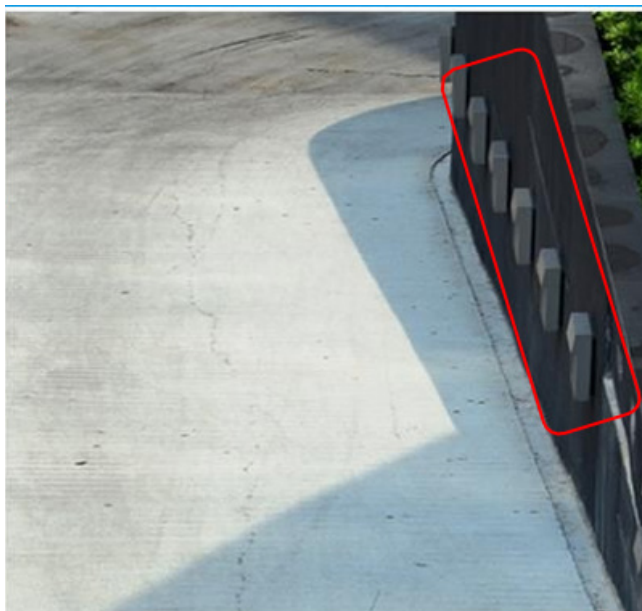

White colored component tray with Milled holes for keeping electronic components .The blue colored robot picks the part from the tray and fits to a part in the assembly, Plascon-V-005, Plascon-H are widely used for such applications

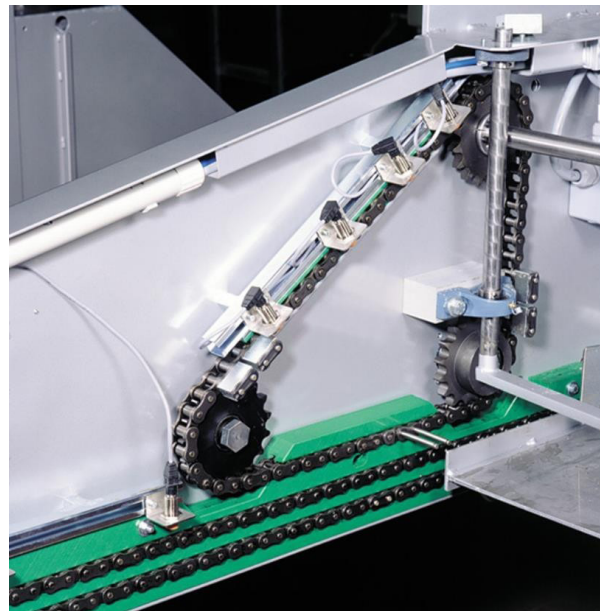

Wall protection in plants, hospitals, parking lots etc

Polyrib-V-005/H for wall protection

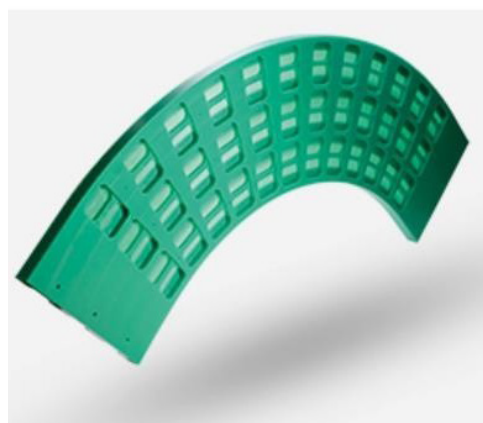

Polyrib-V-005/H for wall protection
For underground parking lot

Various Machine Parts for Industry

Corner tracks for Chains in Conveyor industry

Wheels pulleys, bushes, nozzles etc for general engineering applications
